Appl. No. 10/711,685
Docket No. PES-D-003-025 / PES-0220

The Examiner remarks in Paper No. 20080104, page 3, that the "reasons for amendment" were because par. 21 does not disclose that the pressure exceeding 500 pounds per square inch is withstood by the first bond line and the second bond line as claimed in claims 1 and 13.

Applicant respectfully disagrees, as para. 21 clearly discloses that cells 200 may be operated at elevated pressures upwards or exceeding even 10,000 pounds per square inch. Applicant commented in a January 4, 2008, correspondence to the Examiner that Claims 27 and 28 were cancelled merely to expedite prosecution and allowance of the case, and not for any reasons relating to patentability. When read as a whole, the record is clear and complete that the amendments were not made for the reasons stated by the Examiner.

The Examiner further remarks that Claims 1-23 and 26 are allowed for reasons set forth in Paper No. 20080104, page 3.

While Applicant agrees that presented claims pertain to allowable subject matter, Applicant respectfully submits that to the extent that the Examiner's remarks imply, suggest or state that certain limitations or combinations not found in the prior art of record relied upon are or may be present in each and every allowable claim, whether or not specific language to that effect is found in every allowable claim, the record as a whole must be considered in addition to the Examiner's remarks, and, to the extent that the record as a whole is clear and complete, it shall control the interpretation of any and all allowable claims.

Appl. No. 10/711,685
Docket No. PES-D-003-025 / PES-0220

More specifically the Examiner's statement of reasons may imply that features found in the specification only, in the dependent claims only, or in some but not all independent claims only, are part of all of the allowable claims, when in fact the record clearly reflects that there are claims not so limited. For example, the Examiner comments that the Spear layers are not in direct contact *with each other*, implying any number of combinations of "direct contact". When read as a whole, the record is clear that the claimed invention is directed to a third layer that is in direct contact with adjacent first and second layers. Accordingly, claims not reciting limitations found in the claims are not so limited.

Respectfully submitted,

CANTOR COLBURN LLP
